---------------------	----------

Functional Requirements

Goal Creation:

After clicking on the button, users will be able to create new goals, view active as well as completed goals.

Daily affirmations:

After clicking on daily affirmations, users will be able to read or speak loudly affirmations daily. By this, users will be more positive towards life and their thought process will also become positive gradually if the affirm daily by reading or speaking loudly.

Join Community:

In this, users will be able to join different kind of communities if they want to join and discuss problems. They will also be able to post relatable stories.

Group chat option will be there to have a chat in-group with known members will be there.

Lift your mood:

As of now, there will be two options here. One is chat randomly to share bad day/anything with stranger and other will be sing together by playing favourite song.

Account creation/login:

Login/signup page will be there for login/signup

How's your mood pop up:

There will be a pop up with a question "How's your mood today?" when user login first time everyday.

Technical/Performance Requirements

A website will be developed in this project that will carry above mentioned tools and features.

Website response time is based on the internet connection. If it is good, users can navigate between pages at good pace.
